📍 Brazil

Professional profile

Data Engineer and Analytics Engineer with 7+ years of experience turning operational and business data into reliable, scalable analytics. Strong SQL practice, cloud platforms (AWS, Azure, GCP), and production ETL/ELT design. Hands-on with **Snowflake**, **Databricks**, and Spark (PySpark); practical experience with data lake and data warehouse architectures. Emphasis on performance, observability, and maintainable pipelines.

Comfortable translating business rules into data models, collaborating in Agile Scrum teams, and communicating results to technical and non-technical stakeholders. Driven by automation, clear metrics, and measurable impact.

Core competencies

WAREHOUSE & CLOUD

Snowflake (warehousing patterns, tasks, sharing); AWS (S3, Glue, Redshift, Athena); Azure (Databricks, Data Factory, DevOps); GCP (BigQuery).

PIPELINES & ORCHESTRATION

ELT/ETL in production; dbt-style modular transforms and tests; Airflow; CI/CD; observability, retries, and idempotent loads.

MODELING & SQL

Dimensional modeling, grain discipline, incremental loads, advanced SQL for analytics and troubleshooting.

DELIVERY

Agile Scrum, cross-functional work, requirements analysis, solution architecture, project leadership.

TECHNICAL SKILLS (YEARS · LEVEL)

Sections follow a résumé-style matrix: skill name, years of practice, then level (Exposure → Beginner → Intermediate → Advanced). Numbers are indicative, not a legal claim.

Programming languages

SQL	7+ Advanced
Python	7 Advanced
Bash / shell	5 Intermediate

Scala	2 Intermediate
R	2 Beginner
TypeScript	2 Beginner
Java	1 Exposure
YAML	4 Intermediate
Jinja	1 Exposure
Go	1 Exposure

Frameworks and libraries

dbt	1,5 Advanced
Spark / PySpark	4 Advanced
Apache Airflow	4 Advanced
Delta Lake / DLT	3 Advanced
Pandas / Polars	4 Intermediate
GE (data tests)	2 Beginner
Apache Iceberg	1 Exposure
Apache Hudi	1 Exposure
OpenLineage	1 Exposure
PyArrow / Parquet	3 Intermediate
FastAPI	2 Beginner
Apache Flink	1 Exposure
Ray	1 Exposure

Databases and products

Snowflake	2 Advanced
Databricks	4 Advanced
Redshift	2 Intermediate
Athena (Presto SQL)	4 Intermediate
PostgreSQL	5 Advanced
SQL Server	2 Intermediate
Kafka	3 Intermediate
MongoDB	1 Exposure
Redis	2 Beginner
DuckDB	2 Intermediate
MySQL / MariaDB	2 Beginner
OpenSearch / ES	1 Exposure
BigQuery	1 Exposure

DynamoDB	1 Exposure
SQLite	3 Intermediate
Oracle	1 Exposure
TimescaleDB	1 Exposure

Cloud platforms & infrastructure

Terraform	3 Intermediate
AWS	5 Advanced
CloudFormation	2 Beginner
Azure	3 Intermediate
GCP (BQ, IAM, GCS)	1 Exposure
Docker	3 Intermediate
Kubernetes	2 Intermediate
GitHub Actions	3 Intermediate
Azure DevOps	2 Beginner
VPC / networking	3 Intermediate
Secrets / Vault	3 Intermediate
Pulumi	1 Exposure
Observability	4 Intermediate

Orchestration, quality & governance

Databricks Jobs	3 Intermediate
Snowflake Tasks	2 Intermediate
Data quality	4 Intermediate
Unity Catalog	2 Beginner
Dagster	1 Exposure
Prefect	1 Exposure

BI, metrics & stakeholder handoff

Power BI	3 Advanced
Tableau	1 Exposure
Looker	1 Exposure
Metabase	2 Advanced
Agile / Scrum	7+ Advanced

CERTIFICATIONS

AWS Certified Cloud Practitioner

Astronomer Certification — Apache Airflow Fundamentals

Fullstack Labs Certified — Data Engineer

Certifications

- AWS Certified Cloud Practitioner
- Astronomer Certification — Apache Airflow Fundamentals
- Fullstack Labs Certified — Data Engineer

Languages

- English — native or bilingual proficiency
- Portuguese — native or bilingual proficiency
- Spanish — limited working proficiency

Professional experience

Senior Data Engineer

Tarmac.IO · Remote

Project: Tarmac.IO — embedded programs in logistics (inventory, routes, medallion marts) and healthcare (Databricks Lakehouse, DLT, compensation analytics, governance).

Responsibilities:

Embedded — logistics. Supply chain and logistics data platform: real-time inventory, route optimization, material lifecycle. Medallion architecture (Bronze / Silver / Gold), modern ELT, scalable data products for operations and BI.

Embedded — healthcare. Workforce and compensation analytics on Databricks Lakehouse; Delta Live Tables; data quality, lineage, and governance.

Infrastructure automation, orchestration, and performance tuning with Terraform and cloud-native tooling.

Lead data engineering for internal tools and customer-facing products: Python, SQL, dbt, Spark.

Migrate legacy systems to Snowflake and Databricks; scalable models for analytics and reporting.

Partner with product and engineering; automated monitoring and retries for scheduled jobs and notifications.

Agile ceremonies and sprint planning with global teams; AWS and Terraform for provisioning and automation.

Technologies: dbt, Databricks, Snowflake, DLT, Terraform.

Duration: May 2025 — present.

Data Engineer

AB InBev

Project: AB InBev — The Loop Hub: global sales, marketing, and operations KPIs on a Databricks and Snowflake lakehouse with factory-style reusable pipelines.

Responsibilities:

The Loop Hub. Centralized platform for global sales, marketing, and operations: standardized KPIs and decisions. Lakehouse on Databricks and Snowflake; scalable models and near real-time analytics. Factory-style ETL pattern for modular, reusable pipelines across domains.

Requirements analysis, business rules, and structures for a unified analytics environment.

ETL in Databricks and Snowflake; Spark integrations; Azure Data Factory and Azure DevOps for reliability.

Agile Scrum with multidisciplinary teams; clear communication of results and blockers.

Technologies: Databricks, Snowflake, Factory ETL, Global KPIs.

Duration: Aug 2023 — May 2025.

Data Engineer

Banco Bari · Curitiba, PR

Project: Banco Bari — enterprise banking analytics on AWS (S3, Glue, Athena, Redshift) with high-volume ETL and self-serve access for finance and operations.

Responsibilities:

Modern banking analytics platform: internal and external financial sources on AWS (S3, Glue, Athena, Redshift). ETL for scalable processing, reliable ingestion, and performance on large datasets; improved accessibility for financial and operational teams.

ETL with AWS (S3, Athena, EC2, EKS, ECR, Redshift, Glue); advanced SQL.

Apache Airflow DAGs for reliability and observability; Agile planning and delivery.

Technologies: AWS, Glue, Redshift, Airflow.

Duration: Jan 2022 — Sep 2023.

Senior Data Analyst

Banco Bari · Curitiba, PR

Project: Banco Bari — KPIs, dashboards, and analytical support for internal business units (Curitiba, PR).

Responsibilities:

Dashboards and KPIs for business units; Power BI, SQL, AWS Athena, Power Query M, Python.

Exploratory analysis, metric definition for objectives, and stronger data culture across areas.

Technologies: Power BI, SQL, Athena, Python.

Duration: Dec 2020 — Dec 2021.

Project Analyst

Banco Bari · Curitiba and region, Brazil

Project: Banco Bari — IT outsourcing portfolio: scope, budget, suppliers, and contractual governance.

Responsibilities:

Outsourcing and IT projects: scope, budget, planning, risk, status reporting, and contractual compliance.

Phases, estimates, supplier payments, negotiations, and third-party contracts.

Technologies: Projects, Agile context.

Duration: Aug 2019 — Dec 2020.

Process Analyst

Groupe Renault (Segula Technologies) · Curitiba, Paraná

Project: Groupe Renault via Segula Technologies — CAPEX/OPEX and investment control for vehicle capacity programs.

Responsibilities:

Project financial control (investments vs expenses); CAPEX/OPEX on vehicle capacity programs (large financial volumes).

Stakeholder coordination, budgets aligned to strategy, and reporting to management.

Technologies: Finance, CAPEX/OPEX.

Duration: Mar 2019 — Aug 2019.

Project Analyst

Bradesco Seguros · Curitiba and region, Brazil

Project: Bradesco Seguros — BIA (Business Intelligence Analytics) delivery for social-security programs.

Responsibilities:

BIA — Business Intelligence Analytics (social security): MS Project, reduced delivery timeline, milestone reporting.

Risk management, integrated testing, partnerships with business areas, process definition support.

Technologies: MS Project, BIA.

Duration: Aug 2016 — Aug 2018.

Process Analyst

HSBC · Curitiba and region, Brazil

Project: HSBC — process improvement, controls, SLA compliance, and documentation in a regulated banking environment.

Responsibilities:

Process improvement, root-cause analysis, tools for control and management, SLA compliance.

Benchmarks, process documentation to standards.

Technologies: Banking, Process, SLA.

Duration: May 2014 — Aug 2016.

How I operate

Hiring-manager lens on delivery style; roles and dates are in Professional experience above.

01

Design, scale, and optimize Snowflake-centric pipelines and marts

Own the middle: requirements workshops, metric grain, naming, and dbt or SQL models on Snowflake or Databricks before dashboards, at Tarmac.IO (healthcare compensation, logistics), AB InBev global KPIs, and Banco Bari banking analytics.

02

Reusable transforms + tests (dbt or equivalent discipline)

Production dbt with Snowflake and Databricks; medallion patterns; factory-style reusable pipelines at AB InBev. I default to gating releases with tests, documented contracts, and lineage.

03

Curated hand-off for analytics consumers (semantic mindset)

Shipped dashboards and reporting packs in Power BI; here the /api/metrics contract and dashboard route mimic the boundary you would get from a governed semantic layer before any specific BI tool: versionable, safe for analysts.

04

Ownership under constraints (cost, performance, compliance)

Snowflake and Databricks in production; Spark/PySpark; Airflow; and enterprise delivery patterns. I prioritize cost and reliability, not only feature velocity.

05

Regulated-industry discipline (including HSBC)

HSBC (May 2014–Aug 2016) as Process Analyst: process improvement, root-cause analysis, SLA compliance, and documentation in a regulated banking environment. Same rigor today when auditability, access control, and change management matter in data platforms.
